

AI-RESUME BUILDER

☀️ Tutorial 1: Creating a Brand Campaign with AI Resume Builder

This is your first tutorial to create a brand campaign of our AI Resume Builder.

In this tutorial, we'll walk through different angles you can use to market an AI Career Coach product that resonates with students and job seekers.

1. Resume Creation (ATS-Friendly)

- **Ad Campaign Idea:** Everyone struggles with ATS filters. Show how your tool fixes that instantly.
 - **Prompt to Use:**
"Resume builder, ATS-friendly, contains all necessary keywords, turns your CV ATS-compliant in two minutes."
 - **Focus Angle:**
 - Highlight speed and compliance.
 - Focus on the pain point: "Rejected → Hired."
-

2. Cover Letter Magic

- **Ad Campaign Idea:** Cover letters feel like a chore. Show how AI transforms a "bland summary" into an "emotional pitch."
- **Prompt to Use:**
"Create an ad campaign or blog on how you just type in a gist of yourself or your skills, and our builder creates an emotional, compelling campaign."
- **Focus Angle:**
 - Position it as personal storytelling at scale.
 - Frame: "From skills → to story → to job offer."

3. Interview Prep (Confidence Booster)

- **Ad Campaign Idea:** AI isn't just documents — it's practice. Show how it plays the role of a mock interviewer.
- **Prompt to Use:**
"Create a template that showcases that once you fill in your resume + job role+ industry+requirement type, our platform creates tailored interview questions."
- **Focus Angle:**
 - Emphasize personalized preparation.
 - Example outputs:
 - Amazon → data analysis challenges.
 - L'Oréal → creative campaign examples.

4. Industry-Specific Tailoring

- **Ad Campaign Idea:** One resume does not fit all jobs. Students often don't realize this. Show industry-wise differences.
- **Prompt to Use:**
"Emphasize that you can tailor resumes based on industry. For example: Retail/Luxury brands like L'Oréal need a different format than Amazon. Show how our builder suggests industry-specific projects and uses STAR & growth method in resumes."
- **Focus Angle:**
 - Push the "market-ready edge."
 - Not just a resume → an industry-specific career story.

5. Wrap-Up Marketing Positioning

- **Speed:** "Your resume in 2 minutes."
- **Emotion:** "Cover letters that connect."

- **Confidence:** “Tailored interview practice.”
- **Relevance:** “Resumes that fit your industry.”

What result did we achieve?

Detailed Resultants – AI Resume Builder Campaigns

AI Resume Builder – Campaign Content

1 ATS-Friendly Resume Campaign – “*Beat the Bots*”

Ad Copy

- **Hook:** “*Is your resume invisible? 92% of CVs never reach a human.*”
- **Body:**
 - Most rejections happen before a recruiter even sees your application.
 - Our AI Resume Builder fixes that in just 2 minutes.
 - ATS-friendly. Keyword-rich. Compliance guaranteed.
 - Don’t let software decide your career. Beat the bots.
- **CTA:** “*Generate your ATS-Ready Resume Now.*”

Visual Concept

Carousel (LinkedIn/Instagram):

1. Slide 1 → “92% of resumes get rejected by ATS ” → Black background, bold white text.
2. Slide 2 → Screenshot of a resume stamped “*Rejected by System.*”
3. Slide 3 → Same resume glowing with “ *Passed ATS.*”
4. Slide 4 → Product logo + CTA → “*Create Yours in 2 Minutes.*”

Reel/TikTok:

- **Opening (Pain):** Animation of resumes falling into a black hole.
- **VO:** “*Why does your resume never reach HR.*”
- **Transition (Solution):** Demo of AI builder scanning & optimizing resume → keywords lighting up.

- **Closing (Outcome):** Recruiter smiling while holding a glowing resume. Overlay: *“Passed ATS. Ready for review.”*

Execution Note: This campaign works best with **stats-driven hooks** and **before/after contrasts** that dramatize the invisible rejection problem.

2 Cover Letter Campaign – *“Turn Skills into Stories”*

Ad Copy

- **Hook:** *“Stop dreading cover letters.”*
- **Body:**
 - Most cover letters sound the same: stiff, generic, forgettable.
 - With our AI Builder, type just a few lines about your skills.
 - Our AI transforms them into a compelling, human story that employers *feel*.
 - Not just words — a narrative that connects.
- **CTA:** *“Build Your Story. Get Hired.”*

Visual Concept

Blog/LinkedIn Article:

- **Headline:** *“See the Difference Storytelling Makes.”*
- **Visual:** Side-by-side comparison —
 - Left: *“I am writing to apply...”*
 - Right: *“Leading a project that saved \$10,000 taught me teamwork and impact...”*

Instagram Reel:

- **Clip 1:** Student typing generic line.
- **Clip 2:** AI instantly rewriting into emotional opener.
- **Clip 3:** Recruiter smiling, nodding.
- **Overlay:** *“From bland → brilliant. In 60 seconds.”*

Execution Note: The strength of this campaign lies in **relatability** — every student/job seeker has struggled with lifeless cover letters. By showing a transformation, you visually prove the product's value.

3 Interview Prep Campaign – “Practice with AI”

Ad Copy

- **Hook:** “What if AI could be your interview coach?”
- **Body:**
 - Upload your resume and role.
 - Get tailored interview questions that recruiters are likely to ask.
 - Practice with STAR-based answer frameworks and instant feedback.
 - Walk into your interview prepared, not panicked.
- **CTA:** “Try AI Mock Interviews Today.”

Visual Concept

Carousel Ad:

1. Slide 1 → Nervous student sweating. Text: “Not ready for interviews?”
2. Slide 2 → AI interface showing role-based Q&A.
3. Slide 3 → STAR method template overlaid: Situation, Task, Action, Result.
4. Slide 4 → Same student now smiling, answering confidently. Text: “Confidence built here.”

TikTok/Shorts:

- POV: AI voice says: “You’re applying at Amazon. Tell me about a time you worked with data.”
- Cut → Student practicing confidently with STAR overlay popping up.
- Closing → Real interview scene: recruiter nods approvingly.
- Text overlay: “Practice here. Shine there.”

Execution Note: This campaign should be **empathetic** — acknowledge student anxiety but flip it into confidence by showing how AI helps them rehearse smarter, not harder.

4 Industry-Specific Resume Campaign – “One Resume Doesn’t Fit All”

Ad Copy

- **Hook:** *“One resume won’t get you every job.”*
- **Body:**
 - Amazon looks for efficiency and data.
 - L’Oréal values creativity and storytelling.
 - Consulting firms want structured problem-solving.
 - Our AI tailors resumes for each industry, suggesting projects and STAR growth stories that matter.
- **CTA:** *“Create Your Industry-Ready Resume.”*

Visual Concept

Carousel:

1. Slide 1 → Title: *“Amazon vs L’Oréal: Do they want the same resume?”*
2. Slide 2 → Amazon snippet: *“Led analytics project saving \$200K.”*
3. Slide 3 → L’Oréal snippet: *“Created social campaign with 2M views.”*
4. Slide 4 → Demo: AI interface with dropdown → *“Select Industry → Get Custom Resume.”*

Blog Ad:

- Title: *“The Hidden Resume Secret Nobody Tells Students.”*
- Body: Example of one generic resume rewritten into 2 versions: one for Amazon, one for L’Oréal.
- CTA: *“Stop sending the same resume everywhere. Build the right one every time.”*

Execution Note: This campaign plays on **student misconceptions** (“one resume fits all”) and educates while selling. It positions your tool as **smarter and industry-aware**, not just a template generator.

🎯 Unified Brand Positioning Across Campaigns

- **Core Promise:** *“From Resume → To Interview → To Offer. AI Built, Career Ready.”*
- **Tone:** Relatable, aspirational, supportive (never too corporate, always student/job seeker friendly).
- **Visual Style:**
 - Before/After contrasts.
 - Split-screen storytelling.
 - Strong  /  signals.
 - Dynamic overlays for action verbs (e.g., *“Passed ATS,” “Confidence Built,” “Industry Ready”*).
- **Content Formats:**
 - **Carousels:** LinkedIn/Instagram → best for education + shareability.
 - **Reels/TikToks:** Storytelling hooks, quick transitions → best for awareness + virality.
 - **Blogs:** Deep dives + SEO → best for authority building + conversions.

☀ Video Storytelling Campaign – “*Why Use the Same Resume Everywhere?*”

Rohan sat at a café with his laptop open, staring at yet another rejection email. He had applied to a luxury retail internship at L’Oréal, a fintech role at Paytm, and a product analyst role at Amazon — all with the same resume. And each reply was the same: “*We regret informing you...*”

His friend Meera, sitting across from him, shook her head.

“Rohan, why are you sending the same resume everywhere? If you want to get into retail, they care about storytelling and customer experience. If it’s fintech, they want data, precision, risk analysis. And Amazon? They’ll look for efficiency and measurable results. You can’t expect one document to convince all of them.”

Rohan sighed. “I know... but I don’t have time to keep rewriting.”

That’s when Meera showed him our platform on her phone.

“Look — this AI Resume Builder fixes exactly that. Watch.”

He uploaded his old resume. Within minutes, it was rebuilt into an ATS-compliant version, keyword-optimized so it could finally pass through filters. Then Meera clicked another tab: *Cover Letter Builder*. “Just type a few lines about yourself,” she said. And instantly, Rohan saw a cover letter transform into something personal, emotional, compelling.

But the real magic came next. Meera selected “Retail” as the industry. The resume shifted — suddenly highlighting his experience with customer-facing projects, leadership in events, creativity in campaigns. Then she switched to “Fintech.” The same resume now emphasized his analytical projects, risk management coursework, and efficiency-driven achievements.

“See?” she said. “It doesn’t just copy-paste. It tailors your profile to what *that* industry values.”

Finally, she showed him the *Interview Prep* feature. “Pick the job role you’re applying for,” she explained. Rohan entered “Business Analyst.” The AI instantly generated a list of interview questions he was likely to face — complete with STAR-method guidance to frame his answers. For the first time, he didn’t feel nervous; he felt prepared.

Two weeks later, Rohan wasn’t facing rejection emails anymore. He was juggling calls from recruiters — retail, fintech, even Amazon. Each one saw a version of him that fit *their world*.

And it all started with a simple realization: *why send the same resume everywhere when you can send the right one, every time?*

Our AI Resume Builder: From ATS-friendly resumes, to compelling cover letters, to interview prep, to industry-specific tailoring — it's not just a tool, it's your career coach.

Conclusion: How Prompting Shaped These Campaigns

- **Starting Point – Identifying Focus Areas:**

- I first asked AI: *“What areas should I focus on for an AI Resume Builder / Career Coach brand campaign?”*
- From this, four core pillars emerged: **ATS-friendly resumes, cover letters, interview prep, and industry-specific tailoring.**

- **Problem-to-Solution Prompts:**

- For ATS campaigns, I framed prompts around the pain point (*“resume rejection”*) and solution (*“ATS compliance in 2 minutes”*) to generate impactful ad copy.

- **Storytelling Prompts:**

- For cover letters, I prompted the AI to *“turn a gist of skills into an emotional, compelling campaign”* — ensuring outputs moved beyond technical features to narratives that connect emotionally with employers.

- **Framework-Driven Prompts:**

- For interview prep, I guided the AI using *STAR method prompts*, so the generated questions and answers followed a clear structure recruiters value.

- **Contextual / Industry Prompts:**

- For tailoring, I asked AI to *compare industries (Amazon vs. L'Oréal)* — ensuring resumes reflected different employer values (efficiency vs. creativity).

- **Scenario-Based Prompts:**

- To tie everything together, I used story-driven prompts like *“Show a student facing rejections, discovering the platform on Instagram, and transforming their journey”* to make campaigns more

relatable.

- **Comparative Prompts:**

- I deliberately included *before/after phrasing* (e.g., bland vs. brilliant cover letters, rejected vs. passed resumes) to visualize transformation.
-

✨ Next Steps

- These campaigns show how **different prompting approaches (instructional, storytelling, framework-based, contextual, comparative)** can be combined to create a **full marketing playbook**.
- I can expand this into:
 - A **Prompting Framework Guide** → checklist for building campaigns.
 - A **Workshop / Tutorial Series** → teaching students & marketers how to use prompts step by step.
 - A **Case Study Blog** → showcasing the AI Resume Builder as a live example of prompt engineering in action.
