

cake in a jar

Instagram Campaign Story – *From Panic to Pure Joy*

Dishti wakes up with a sudden jolt. Today is Sakshi's birthday, and her heart sinks when she realizes — she completely forgot the cake. She knows Sakshi's favorites by heart: the richness of chocolate, the indulgence of coffee, the timeless charm of red velvet. But the thought of buying three separate cakes feels ridiculous. Too much money, too much wastage, and honestly, how will she even carry three huge boxes across town without ruining them? The worry shows on her face — the dilemma of every friend who wants to make a birthday perfect but also practical.

And then, she stumbles upon the answer — **Cake in a Jar.**

She opens a box to find the cutest, most elegant jars, each one layered with decadent cake and frosting. Chocolate, red velvet, and coffee — all perfectly portioned, travel-friendly, and oh-so-Instagrammable. She smiles with relief, imagining Sakshi's face lighting up at the sight. No crumbs, no mess, no waste. Just thoughtful little jars that double as gifts and treasures.

That evening, the scene transforms. Sakshi and Dishti sit on the balcony, gossiping, laughing at inside jokes, their spoons diving into rich swirls of cake. Sakshi's eyes sparkle — she didn't have to choose one flavor; she got them all. The jars, now empty, don't go to waste. They become pen holders, flower vases, and tiny keepsakes of the day. A birthday saved, a friendship celebrated, and a simple truth discovered: *"Have a Cake and Eat it Too — Cake in a Jar."*

TikTok Campaign Story – *Bestie's Cake Hack*

The screen opens in chaos: Dishti frantically checking her calendar, gasping — *"Oh no! Sakshi's birthday cake!"* Quick cuts: her scrolling cake shops, biting her nails, muttering, *"Red velvet, chocolate, coffee... she loves them all. But I can't carry three giant cakes across the city. And what if half of it goes to waste?"* The panic is real, the dilemma relatable.

Then comes the twist. The solution flashes onto the screen — rows of gorgeous **Cake in a Jar.** Close-ups show velvety red sponge topped with cream cheese frosting, fudgy chocolate layers dripping with ganache, and coffee cake with swirls of mocha buttercream. Each jar is neat, compact, travel-proof, and literally built for moments like this. The captions pop: *"Less wastage ✓ More flavors ✓ Easy to carry ✓ Reusable jars ✓"*

Cut to the happy ending: Sakshi squealing with delight, hugging Dishti, as they both dig into their jars. The vibe is cozy, messy in the best way, filled with laughter, gossip, and pure indulgence. The jars sit on the table, later reused as little organizers — no single-use waste, only endless

memories. The screen zooms out with a cheeky line: *“Crisis averted. Friendship upgraded. Have a Cake and Eat it Too.”*

👉 Both versions highlight:

- **Problem** → Forgetting / inconvenience of traditional cakes
- **Solution** → Cake-in-a-Jar (flavors, portability, eco-friendly reuse)
- **Emotional Payoff** → Friendship moments, joy, memories

Step-by-Step Prompt Engineering Tutorial for Digital Marketing Campaigns

Step 1. Define the Idea & Selling Points

Prompting Goal: Use ChatGPT/Claude to brainstorm the “*why*” of your product.

- **What we did:** We started by thinking about *Cake in a Jar* as more than dessert — we explored **pain points** (cake wastage, bulky packaging, messy transport) and **selling points** (multiple flavors in one order, convenience, Instagrammable jars, reusable packaging).
 - **Prompt Example:**

“List the common problems people face with traditional birthday cakes, and suggest how Cake in a Jar solves them. Give me bullet points of customer pain points vs product solutions.”
 - **Output we used:** Clear messaging pillars → *Less Wastage, More Flavors, Portable, Reusable*.
-

Step 2. Generate Visuals with AI (MidJourney)

Prompting Goal: Translate the brand story into compelling imagery.

- **What we did:** We crafted MidJourney prompts focusing on background, mood, and flavor aesthetics. The goal was to generate **scroll-stopping visuals** for ads.
 - **Prompt Example:**

“Studio shot of three gourmet cakes in glass jars — one red velvet, one chocolate, one coffee. Soft mint-green background, natural lighting, photorealistic textures, fruits and coffee beans styled on the side, luxury packaging, aesthetic product photography.”
 - **Why this works:** By specifying *flavors, setting, colors, lighting*, the images matched our campaign story and felt brand-ready.
-

Step 3. Build Storytelling Campaigns (ChatGPT)

Prompting Goal: Use narrative-driven prompts to turn features into engaging social media stories.

- **What we did:** We asked ChatGPT to create **mini storylines** tailored to Instagram and TikTok.
 - **Prompt Example:**

“Write a storytelling script for Instagram and TikTok where one best friend forgets to buy a birthday cake, realizes the dilemma of multiple flavors and carrying boxes, and then discovers Cake in a Jar as the perfect solution. Make it compelling, emotional, and end with the tagline ‘Have a Cake and Eat it Too.’”
 - **Output we used:** A flow of short, engaging stories → Dishti forgetting, the dilemma, Cake-in-a-Jar saving the day, ending with friendship moments.
-

Step 4. Connect Platforms to Storytelling Style

Prompting Goal: Adapt the same story for different platforms.

- **Instagram:** More aesthetic, polished, emotional → *balcony gossip, elegant jars, soft lighting.*
 - **TikTok:** Fast, funny, relatable → *panic, jump cuts, captions, bestie energy.*
 - **Prompt Example:**

“Rewrite the same campaign in two versions: one polished and aesthetic for Instagram, one quirky and fast-paced for TikTok.”
-

Step 5. Expand Into Campaign Assets

Prompting Goal: Repurpose prompts into diverse marketing deliverables.

- Instagram reels, TikTok skits, Carousel posts → using story snippets.
- Taglines & ad copy → *“Less Wastage. More Flavors. Perfectly Jarred.”*
- CTA prompts → *“Have a Cake and Eat it Too.”*

- **Prompt Example:**

“Generate 5 short, catchy ad copy taglines for Cake in a Jar, highlighting convenience and gifting.”

Learning Outcome:

Through prompt engineering, we:

1. Identified pain points → crafted selling points.
2. Created product visuals with MidJourney.
3. Built emotional stories with ChatGPT.
4. Tailored narratives per platform.
5. Expanded into multiple campaign assets.
